

STRATEGY DESCRIPTION

Multi-Asset Portfolio wherein each individual algorithm has a weighted allocation computed by a dynamic quantitative analysis model for optimized risk and returns. These weight factors are recalibrated monthly for optimal fund performance.

For example:

- If algorithm #001 underperforms over the past few months, it is allocated only 3% of the total capital the following month.

- Conversely, algorithm #004 outperforms over the past few months and is therefore allocated 8% of the total capital the following month.

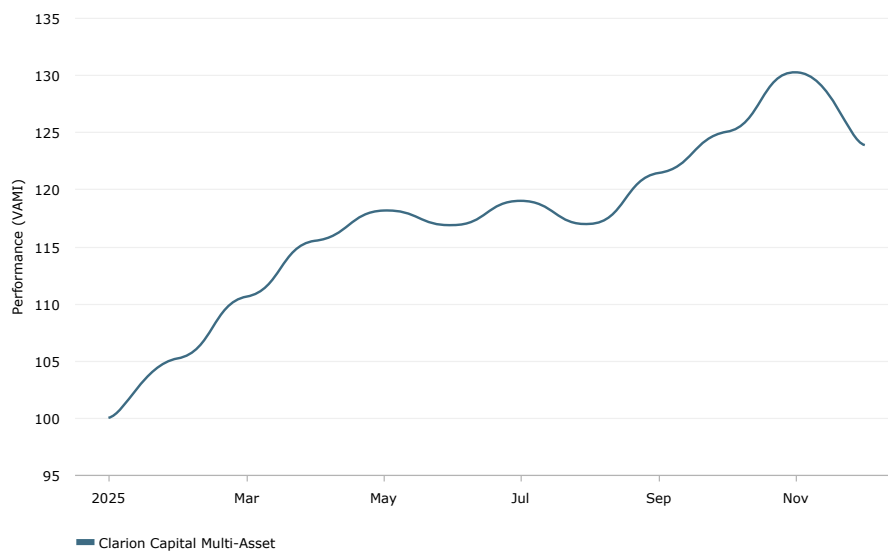

FUND MANAGER

Clarion Capital is a Dutch fund that specializes in actively trading through automated trading strategies. As a fund, we are constantly diversifying our portfolio by developing new algorithms that are unique in strategy and risk profile.

Within our portfolio of trading algorithms we find an optimal allocation through quantitative analysis.

Clarion Capital targets an annual net return of 20% for its participants.
