

Investment Strategy

Plettenberg Capital is a software-driven systematic investment firm built around a fast, automated research engine that discovers and evaluates strategies at scale. Our platform runs 470+ independent algorithms across global equities, commodities, government bonds, sector ETFs, and select digital assets. By mapping how liquidity flows across sectors and regions, we position ahead of major shifts rather than reacting to them. Breadth is our core robustness: hundreds of small, uncorrelated edges help avoid crowding and reduce drawdowns during stress. The result is a diversified, adaptive portfolio engineered to deliver consistent risk-adjusted returns with low correlation to traditional benchmarks.

Risk Management & Technology

Risk management is embedded throughout the investment process. Position sizing follows volatility, liquidity, and correlation constraints, with exposures adjusting automatically as market conditions shift. Breadth across thousands of signals and 470+ algorithms reduces concentration, while selective hedging is used during periods of elevated stress to protect the downside.

Our technology stack includes proprietary research and signal engines running large-scale models on real-time and historical market, macro, and cross-asset data. Scenario analysis, regime detection, and cross-asset relationships are integrated into the system, supported by automated monitoring, real-time alerts, and daily exposure reviews.

Track Record

Monthly Performance (%)

	J	F	M	A	M	J	J	A	S	O	N	D	YR
2026	1.5	4.4	5.2										11.4
