EXECUTIVE TEAM

Tyler Fandl

Chief Investment Officer

tyler.fandl@firstteamcap.com

Tyler has 16 years of experience managing and refining his long-short equity investment strategy. He draws insight for this strategy from his versatile background.

Tyler originally worked for Regeneron Pharmaceuticals, where he cultivated a process-oriented approach to decision-making, grounded in rigorous experimentation and evidence-based analysis. As a sell-side trader for institutional clients, he learned how to identify large accumulation/distribution patterns, and how to time the growth cycle stages of top performing stocks. Within the venture capital space and as an entrepreneur, he helped develop, launch, market, and evolve technologically enabled products and services through various growth phases, leading to an understanding of the characteristics of successful products and companies from conception to maturity. Prior to serving as CIO for First Team Capital, Tyler worked for Merrill Lynch where he managed the growth investment fund for a \$2.1B team portfolio. He graduated from Amherst College with a focus on economics where he played quarterback on the football team. Currently, he lives with his wife and two children in Ridgefield, CT. As CIO, Tyler is responsible for all investment strategy, portfolio construction, and portfolio management.

Raul Barroso

Chief Operating Officer

raul.barroso@firstteamcap.com

Raul Barroso brings 25 years of diverse institutional financial industry experience to First Team Capital.

He has spent the last decade as a global technology sector portfolio manager at multi-strategy hedge fund platforms most recently with Walleye Capital. Prior to his buy-side tenure, he spent 14 years abroad in high-profile managerial roles at leading global investment banks including Managing Director, Head of Asia Semiconductor and Hardware Research at Cantor Fitzgerald, Managing Director Head of Asia Pacific Product Management at Jefferies, and the Head of Pan Asian Technology Sales at Morgan Stanley. He is a CFA Charter holder and graduated with an MBA from the University of Michigan. Raul oversees all day-to-day business operations as well as corporate strategy and business development of the fund.

INVESTMENT PHILOSOPHY

*Invest in the
Innovation of
Tomorrow.*

*Capitalize on
the Markets
of Today.*

FUND OBJECTIVE

First Team Capital is an actively managed long-short equity fund that seeks consistent long-term capital growth with low correlation to traditional investment strategies. It seeks to achieve this objective by thematically investing in leaders and beneficiaries of disruptive innovation that reshape the way businesses operate and consumers behave. The fund minimizes market exposure and maximizes alpha by integrating deep fundamental research with advanced quantitative multi-directional trading across various time horizons.

WHY INVEST IN FIRST TEAM CAPITAL?

POSITIONED FOR GROWTH

The fund takes a differentiated approach to identifying long term growth opportunities by investing in a concentrated portfolio of companies at the forefront of disruptive innovation. True disruptive innovation is identified by the introduction of a technologically enabled product or service that changes an industry landscape by creating efficiency and accessibility while driving down costs.

LIMIT OPPORTUNITY COST

Through active management of a capacity constrained portfolio, First Team Capital maximizes absolute returns by capitalizing on rapid changes in the markets through short-term, multi-directional trading. The fund employs a holistic view of fundamental and technical analysis to determine market direction while maintaining continuity of its core positions.

PORTFOLIO DIVERSIFICATION

Suited for investors who would like to diversify their existing portfolio through the fund's minimal overlap with conventional passive indices and low correlation to core asset classes held in most investors' portfolios.

GROUNDING IN RESEARCH

Combines top-down and bottom-up research in its portfolio management to identify innovative companies and themes with the best risk-reward opportunities.

OVERVIEW – PORTFOLIO CHARACTERISTICS

Typical Net Exposure	15% (Ability to Adjust Exposure Opportunistically)
Target Max Net Exposure	30% in Market Uptrends
Typical Leverage	1.3:1
Typical Max Leverage	2:1
Typical # of Long Positions	30-35
Typical # of Short Positions	25-30
Target Max Position Size	7%
Typical Core Long Position Size and Duration	5%, 3 Years
Typical Core Short Position Size and Duration	2%, 8 Months

PERFORMANCE

GROWTH OF 1,000,000 USD SINCE INCEPTION

* Performance reflects reinvestment of dividends, interest and capital gains (if any) and is net of a 2% management fee charged by the fund.

** Average monthly 90 day T-bills used as risk-free rate of return.

HFRIEHI represents the HFRI Equity Hedge (Total) Index, an index of investment managers who maintain positions both long and short in primarily equity securities, employing both quantitative and fundamental techniques. Past performance does not guarantee future results.

INVESTMENT PROCESS

PORTFOLIO CONSTRUCTION WORKFLOW

INVESTMENT PROCESS – DETERMINE MARKET DIRECTION

“History doesn’t repeat itself, but it does rhyme.” – Mark Twain

Over 100 years of market history shows **3 out of 4 stocks** follow the underlying trend of the stock market- either up or down. Tracking the underlying trend of the major stock market indexes keeps the daily fluctuations of the stock market in perspective and creates a basis for optimal risk/reward ratios for portfolio allocation.

First Team Capital employs a holistic view of fundamental and technical analysis to categorize the market into three possible stages:

MARKET CORRECTION, **MARKET CONSOLIDATION** or **MARKET UPTREND**

FUNDAMENTAL

The Fund monitors present day events and draw lessons from history to shape and refine our understanding for how economies work. Factors include:

- GDP
- Unemployment
- Fiscal Policy
- Inflation
- Interest Rates
- Financial Stability
- Trade Balance
- Consumer and Business Confidence

TECHNICAL

What registers in the stock market’s fluctuations are not the events themselves, but the human reaction to those events. Its upward and downward swings are caused by excesses of human optimism followed by excesses of pessimism. An excess in one direction breeds an excess in the other. This principle is governed by man’s social nature, and since he has such a nature, its expression generates forms. As the forms are repetitive, they have predictive value.

PSYCHOLOGICAL INDICATORS

- Social Media Interactions
- Volatility
- Put/Call Ratio
- High/Low Ratio
- Bulls Vs. Bears
- Margin Debt

CHART ANALYSIS

- Elliot Waves
- Price/Volume
- Moving Averages
- MACD
- RSI
- Support Regions
- Distribution/
Follow-Through Days

PORTFOLIO ALLOCATION IS DRIVEN BY MARKET DIRECTION

First Team Capital manages risk by managing market exposure. The fund buys stocks in strong uptrends and takes alpha-driven defensive action when the market weakens. As opposed to large passive funds that take on short-term loss during market downturns, our fund limits the opportunity cost of capital by allowing volatility to be the foundation for opportunity and potentially higher returns.

CORRESPONDING PORTFOLIO LONG INVESTMENT ALLOCATION *

0% – 20%	20% – 40%	40% – 60%	60% – 80%	80% – 100%
 MARKET CORRECTION • Short highly overvalued and speculative stocks that have ridden big recent gains and are breaking key support levels. Leading Stocks usually correct 1.5 to 2.5 times the general market. • Sell full positions of weaker stocks, protect gains, and cut losses quickly. • Add to positions of undervalued long-term conviction stocks. • Look for a follow-through day – a big up day (+1.25% or more gain) on at least one major index on rising volume, usually on the 4th to 7th day of an attempted rally- to inform of a potential shift towards an uptrend. Since 1880, no bull market has ever started without a follow-through day.	 MARKET CONSOLIDATION • Utilize short-term trading of heavy volume stocks during periods of increased market volatility and long-term stock price uncertainty. • Trade based on predictive price patterns and momentum swings. • Be cautious with new buys. Look for increased signs of accumulation in the indexes and quality stocks. • Keep an eye on current holdings and consider locking in partial gains of stocks with lower convictions.	 MARKET UPTREND • Buy fundamentally strong stocks breaking out of proper chart base patterns (constructive action) with at least a 40% higher volume than its 50-day trading average. • Use short positions to hedge against short-term negative market swings. • Avoid creating new positions during overly bullish periods of “irrational exuberance.” • Look out for a distribution day – when the market is in an uptrend and a major index is down .2% or more on higher volume than the previous day. A cluster of distribution days within a short period of time indicates institutional selling.		

* Portfolio compositions are indicative only, actual portfolio compositions may vary

INVESTMENT PROCESS – PORTFOLIO ALLOCATION

SHORT

TIME FRAME*: 6-18 MONTHS

The Fund uses short positions to create alpha and hedge against market downturns. These positions decrease risk while also maximizing return potential.

Short opportunities are most often industry incumbents with a lack of vision for growth that have been/will be displaced by new, more efficient technologies resulting in a loss of market share.

Other opportunities include stocks that are:

- Misunderstood growth situations, including “fad” stocks that are breaking down after big run-ups fueled by speculation.
- Trading at the high end of historical valuation ranges and whose earnings will be less than “consensus” estimates.
- “Over-earning” due to transient fundamental factors.
- Dislocated from long-term fundamentals due to shorter-term internal or external factors.
- Experiencing declining technical price action, paired with high trading volume.

TRADING

TIME FRAME*: 0-6 MONTHS

Trading is a market neutral strategy utilized to reduce the overall fund volatility and limit opportunity cost.

The Fund’s trading activity is based on mass market psychology. Understanding how and why emotions and cognitive biases influence investors and create persistent stock market anomalies such as cycles, bubbles, and crashes facilitates the ability to predict and capitalize on their effects.

Automated technical analysis and psychological market indicators predict short-term price movements and momentum swings driven by cyclical market trends and perceived temporary mispricing. These are either influenced by governmental policies, supply and demand flows, social media market sentiment, or by short-term relative valuation.

LONG

TIME FRAME*: 3-5 YEARS

The Fund seeks to invest in strong companies at the forefront of innovation that are leading or changing their industry and generating exceptional sales and earnings growth.

Long-term planning is often undervalued by our short-term world. Slow mass adoption of disruptive technologies causes short-term pricing volatility, which sways the market into undervaluing the lasting impact and true size of the ultimate opportunities of these innovations. The Fund seeks to take advantage of these market inefficiencies by identifying true market potential and investing in stocks/adding to positions during periods of the adoption curve that the market underestimates.

Positions go into the fund on their own individual risk/reward metrics and time targets, on an unlevered basis.

Active position sizing through a disciplined scaling approach and clearly defined exit parameters ensures a dynamic management of alpha.

Capital is not allocated across strategies. Deployment is determined by an analysis of the most attractive opportunities available.

* Time frames are indicative only, actual time frames may vary

INVESTMENT PROCESS – STOCK SELECTION

First Team Capital incorporates an iterative investment approach utilizing both top-down and bottom-up research to identify innovation early, properly time and capitalize on opportunities, and adapt to rapid change.

TOP-DOWN RESEARCH DEFINES THE INVESTMENT UNIVERSE BY EXAMINING HOW THE WORLD IS CHANGING AND WHERE IT IS HEADED

IDEA GENERATION

A convergence of insights from third-party research and analysts, leading industry insiders from academia, venture capital, private and public companies, and crowdsourced online interactions enables a deeper understanding of innovation themes.

OPPORTUNITY SIZING

Research models anticipate future value shifts and market opportunities to identify the time horizon of disruptive innovation themes and entry points for investments

BOTTOM-UP ANALYSIS REFINES THE OPPORTUNITY, IDENTIFIES COMPANIES, AND MANAGES THE PORTFOLIO

STOCK SELECTION

A proprietary scoring system evaluates potential investments based on key metrics, both qualitative and quantitative, to evaluate companies in context of the underlying investment thesis. This includes an initial screening focused on sales and earnings growth to narrow and rank the universe of stocks, then building a valuation and revenue model for the top ranked companies over the next five years.

PORTFOLIO AND RISK MANAGEMENT

The underlying investment thesis of every company is monitored weekly. Positions will be trimmed or added to based on new research insights, changes in conviction, adjustments to company scores, and short-term market actions or market sentiment.

WHAT IS DISRUPTIVE INNOVATION?

True disruptive innovation is identified by the introduction of a technologically enabled product or service that changes an industry landscape by creating simplicity, efficiency and accessibility. Innovation should displace industry incumbents and gain majority market share. First Team Capital identifies disruptive innovation through the following criteria:

01

**Experience significant cost declines
creating increased demand**

When a technology reaches certain levels of affordability or efficiency, its target market can greatly expand and become more diverse. Predictive models are utilized to anticipate the decrease in costs and gain a clearer understanding of the transformative technology's full potential reach.

02

**Has the potential to expand across
sectors and geographies**

A technology that has applications across various industries and regions has the potential to see a significant growth in its target market as it is adopted by different businesses. This scope also provides improved product-market alignment, protects against economic cycle risks, and attracts interest from multiple fields.

03

**Serve as a foundation atop which
additional innovations can be built**

A technology that serves as a foundation for additional technological advancements may find itself with a much wider range of applications than originally thought, making it difficult to predict its future potential. As a result, technology platforms that support innovation can be underestimated in the long term, as it requires foresight into the extent of new products and services that may arise.

ARTIFICIAL INTELLIGENCE & NEXT GENERATION INTERNET

Dynamic computational systems and software that evolve alongside data are revolutionizing industries by automating tasks and solving previously insurmountable problems. This advancement not only enhances efficiency and drives down costs, but also lowers barriers to entry for new businesses. The evolution and adoption of Neural Networks will fuel this progress, leading to an increased demand for unparalleled computational resources. AI-specific hardware is set to dominate Next Gen Cloud datacenters as the requirements for computational resources explodes, playing a crucial role in training and operating AI models. AI driven Intelligent Devices will change the way that people spend, work, and play.

ENERGY STORAGE

The rapid decline in the costs of advanced battery technology is poised to trigger a revolution in energy storage across numerous industries. This transformation will be driven by the emergence of autonomous mobility systems, enabled by advanced batteries, which promise significant reductions in transportation costs for both individuals and goods. Moreover, this revolution will witness a widespread shift away from traditional fuels towards electricity, with large-scale batteries playing a pivotal role in facilitating this transition. These developments underscore the immense potential of energy storage innovations to not only enhance operational efficiency and cost-effectiveness but also to foster a sustainable and resilient energy ecosystem for the future.

FINTECH & PUBLIC BLOCKCHAINS

Public blockchains are positioned to be the foundation of a burgeoning digital economy, enabling a smooth transition of money and contracts to decentralized networks with robust security ensured by digital scarcity and indisputable proof of ownership. Their ability to boost transparency, reduce the impact of capital and regulatory barriers, and lower the costs of executing contracts is set to transform financial transactions worldwide. As the financial infrastructure shifts, digital wallets will become increasingly necessary.

ROBOTICS

Robotic technology, powered by adaptive artificial intelligence, is poised to revolutionize the manufacturing processes by seamlessly integrating with human workers. This collaboration will reshape how products are produced and sold, leading to increased efficiency and innovation. Furthermore, the advent of 3D printing is driving the digitization of manufacturing, enhancing the performance and precision of end-use parts while bolstering supply chain resilience. The development of reusable rockets is steadily lowering the costs associated with launching satellite constellations, facilitating uninterrupted connectivity and enabling advancements in space-based technologies.

DNA TECHNOLOGIES

As the costs associated with gathering, sequencing, and interpreting digital biological information plummet, we are on the cusp of a revolutionary era in DNA technologies. Researchers, therapeutic entities, and health platforms are granted unparalleled access to a comprehensive range of biological data, encompassing DNA, RNA, proteins, and digital health insights. This access fuels gene editing techniques to target and eliminate rare diseases and chronic conditions with unparalleled precision. This capability also enables Programmable Biology, which has applications across industries, including agricultural and food production.

RISK MANAGEMENT

Maintaining a portfolio with high liquidity allows for active management limiting both risk and opportunity cost.

ENTRY TIMING: BUY ON A BREAKOUT

The best stocks follow specific consolidation patterns just before they break out for large gains. A stock that punches through a previous resistance point with high volume shows institutional accumulation and strength that a climb has begun. This strategy can also be applied to later stage bases to add to existing positions.

01 Identify a **BASE PATTERN (CONSTRUCTIVE ACTION)**

Cup with Handle Double Bottom Flat Base

Constructive action typically occurs after a strong prior uptrend.

02 Wait for stock to hit a **Pivot Point** as it emerges from a proper base. Pivot Points are price levels used to determine support and resistance levels. Combined with other technical indicators, pivot points can successfully predict reversals in stock price movements.

03 Buy after a breakout day, when the stock moves up in price past the pivot price in **at least 40% higher volume** than its 50-day trading average, accompanied by a **Relative Strength Line** that is at or near a new high.

Historically, some of the biggest stock market winners had volume two to three times greater than normal on their breakout day.

EXIT DISCIPLINE

STOP LOSSES

IT'S NOT ABOUT BEING RIGHT ALL THE TIME, BUT LOSING THE LEAST AMOUNT POSSIBLE WHEN YOU'RE WRONG.

An absolute stop loss is placed roughly **10% below the entry price**, ensuring that losses are limited. Tiered trailing stop losses are placed on each stock to trim position sizes and protect profits dependent on the volatility of the specific stock. This volatility baseline may change based on broader market conditions.

KEY TECHNICAL SELL SIGNS

- **CLIMAX TOPS**
Largest daily price run-up, heaviest daily volume, exhaustion gap, climax top activity, signs of distribution, increase in consecutive down days.
- **LOW VOLUME AND OTHER WEAK ACTION**
New highs on low volume, signs of a poor rally, poor relative strength.
- **BREAKING SUPPORT**
Long-term uptrend line is broken, greatest one-day price drop, falling price on heavy weekly volume.

Scores of stocks within the portfolio are adjusted based on quantitative and qualitative inputs. Scores are monitored weekly for warning signs, triggering stock reviews when necessary.

1. Fundamental Screening

- Earnings Growth
- Institutional Accumulation/ Distribution
- Sales Growth
- Profit Margins
- Return on Equity

2. Barriers To Entry

- Rise of new disruptive technologies
- Increasing competitive pressure
- Trade barriers and subsidies

3. Execution

- Insufficient/declining R&D spending
- Incorrect target operational model
- Poor sales and marketing spending
- Lack of vision for future innovation
- Loss of market share
- Poor governance

4. Relative Strength

- The stock's price performance over the past 52 weeks lags compared to all other stocks
- The stock's industry group ranking falls

5. Valuation

- The average rate of return for a stock drops below 25% average over five years

6. Thesis Risk

- Regulatory risk
- Geopolitical risk
- Technology adoption risk
- Environmental and Social risk

Confidential

DISCLOSURES

This presentation is neither an offer to sell nor a solicitation of any offer to buy securities in the fund (the “Fund”) managed by First Team Capital, LLC (“First Team Capital”). Any offering or solicitation for an interest in the fund will be made only pursuant to a confidential private offering memorandum (together with current financials, subscription agreement and other relevant documents “Fund Documents”), all of which must be read in their entirety and only in those jurisdictions where permitted by law. In the case of any inconsistency between the descriptions or terms in this document and the Fund Documents, the Fund Documents shall control.

While all the information presented in this document is believed to be accurate, First Team Capital makes no warranty as to the completeness or accuracy of such information, nor can it accept responsibility for errors appearing in this document. Any projections, market outlooks or estimates in this document are forward looking statements and are based upon certain assumptions. Other events which were not taken into account may occur and may significantly affect the returns or performance of the Fund. Any projections, outlooks or assumptions should not be construed to be indicative of the actual events which will occur.

An investment in the Fund is speculative and involves a high degree of risk, including the possible loss of principal. In addition, opportunities for withdrawal/redemption and transferability of interests are restricted, so investors may not have access to capital when it is needed. The Fund may utilize short selling which can result in substantial losses. The portfolio, which is under the sole trading authority of First Team Capital may be primarily concentrated in certain industries or strategies and this lack of diversification may result in higher risk. Leverage will be employed in the portfolio, which can make investment performance volatile. The Fund may also hold options, futures and other derivative positions which involve added risks. An investor should not make an investment unless it is prepared to lose all or a substantial portion thereof. The fees and expenses charged in connection with an investment in the Fund may be higher than the fees and expenses of other investment alternatives. There is no guarantee that the Fund’s investment objective will be achieved, and past performance (if any) is not a guarantee or indicator of future results.

The information presented herein should not be considered a recommendation to purchase or sell any particular security. There can be no assurance that any securities discussed herein will remain in the Fund’s portfolio or, if sold, will not be repurchased. The securities discussed herein do not represent the Fund’s entire portfolio and in aggregate may represent only a small percentage of the Fund’s portfolio holdings. It should not be assumed that any of the holdings identified in this presentation have been or will be profitable, or that recommendations made in the future will be profitable or will equal the investment performance of the securities discussed herein.

This document is strictly confidential and is not intended for public use or distribution.
